

GTM Engineer Practical Assignment

Assignment: Automating/Augmenting the Inbound Lead Process with Public APIs

Context

At EliseAI, we want to accelerate how our sales team handles inbound leads. When a new lead comes in, it usually has only basic info:

- **Person (the contact): Name, Email Address, Company**
- **Building (the building they manage): Property Address, City, State, Country**

An SDR then spends time manually researching, prioritizing, and drafting outreach. Your task is to build a tool to **automate/augment the top-of-funnel process using public (free) APIs**.

Your Task

A) Build a tool that:

1. **Takes lead inputs**
2. **Enriches the lead** by calling at least **two different publicly available APIs**
3. **Generates useful outputs for sales reps**, such as:
 - **Lead Scoring:** feel free to make reasonable assumptions (document them) for what you think may be good leads for EliseAI.
 - **Draft Outreach Email:** use enriched data to generate a personalized intro message
 - **Sales Insights:** key data points a rep may want to know
4. **Automates the process** so it runs on:
 - A **schedule** (e.g., daily at 9am), OR
 - A **trigger** (e.g., a button or when a new row is added to the sheet).

B) Create a project plan for rolling this out in the sales org.

- How would you test and roll this out in a sales org?
 - Think through:
 - Testing your MVP
 - Process to roll it out
 - Timelines
 - What stakeholders you would work with
-

Suggested Public Free APIs

(You may use others, but here are some to get you started):

- **Demographics & Economics**
 - [U.S. Census API](#)
 - [DataUSA API](#)
 - [FRED](#) Federal Reserve Economic Data
 - **Local Context**
 - [OpenWeather API](#)
 - [WalkScore API](#)
 - **News & Events**
 - [NewsAPI](#) – free tier
 - [Wikipedia API](#)
-

Deliverables

- A working tool with:
 - **Input:** lead list (name, email, company, city, state, property address).
 - **Output:** enriched + scored + outreach-ready leads.
- Your script/code.
- A 5–15 min video explaining:
 - Which **public APIs** you used and why
 - How your workflow enriches, scores, and outputs leads
 - Any assumptions made and logic behind them
 - How your scoring/outreach approach would help a sales rep
 - Explain your project plan and roll out process
